

MYBYOME™

#380 Sal Vyrome (Micro Virome Maintenance)

▼ INGREDIENTS

Contains: Prebiotic blend of Siphoviridae and Myoviridae. **Other Ingredients:** Water, NaCl, MgSO₄ and Dipotassium Phosphate.

▼ DOSAGE

- 1 dropper full, twice per day, or as directed.

Note: Best administered by itself, away from other pathogen-disruptive formulas.

▼ PACKAGING

- 1 oz. glass bottle, with dropper.

▼ PERSPECTIVE

Most Salmonella species are rod-form bacterium undesired at high levels in the human gastrointestinal tract and are acquired via eating contaminated meat, eggs, and poultry; or by drinking contaminated water. Salmonella contamination is becoming an increasing concern due to CAFO (Concentrated Animal Feeding Operation) which confines animals in a non-vegetation pen and employs antibiotics and drugs in the feed, often resulting in antibiotic-resistant contaminations in the food supply.

▼ LIFESTYLE

#380 Sal Vyrome (Micro Virome Maintenance)

This Biome formula revolutionizes the natural health approach to assisting the body's normal microbial balance of prebiotic and probiotic influences via the part of the microbiome called the virome. The virome is an amazing part of the human microbiome and includes "phage" and other microorganisms. Utilizing the virome component of the body's microbiome, this "phage" product focuses exclusively on helping the body manage its innate balance between diverse microbiome and normal levels of Salmonella species, in the Enterobacteriaceae family.

Biophages have a long-established presence in supporting a healthy microbiome through their ability to inhabit and replicate inside of specific bacterial species. This product provides practitioners' a safe and effective method of improving the microbiome via Nature's self-limiting process of microbial balance, while completely avoiding collateral damage associated with other methodologies.

▼ INDICATIONS

- Intestinal normal microbiota balance
- Digestive upsets from tainted food

▼ KEY COMPONENTS

- **Myoviridae** - The family of long-tail Caudovirales bacteriophages. This component specifically and exclusively addresses certain prebiotic pathways for a normal intestinal microbiome.
- **Siphoviridae** - A bacteriophage. This component specifically and exclusively engages its life cycle within certain species of bacteria rendering probiotic support for a healthy intestinal microbiome.
- **Prebiotic Blend** - Peptones that support the viability of the phages in the microbiome.
- **NaCl** - Salt (Sodium Chloride). Supports the viability of the phages modeling their seawater aquatic environment.
- **MgSo₄** - Salt (Magnesium Sulfate). Supports the viability of the phages modeling their seawater aquatic environment.
- **Dipotassium Phosphate** - Salt (K₂HPO₄). Supports phage viability by modeling a component of their seawater aquatic environment.

▼ CONTRAINDICATIONS

None when used as directed.

▼ CLINICIAN CONSENSUS

- **Post-Intestinal Derangement From Eating Tainted (Often Fecal Contaminated) Food:**

#380 Sal Virome - Micro Virome Maintenance

#138 MBC - Microbiome Colonizer

#260 WO - China Healing Oil - (to be used at a completely separate time of day)

▼ BACKGROUND

Dr. Shayne Morris, a micro- and cellular-biologist, developed this patented formula to help the body support its intestinal microbiome, specifically the micro-virome. Along with the phage formula, Eco Vyrome, this formula brings a new pre-biotic dimension to natural support of the body's normal G.I. tract microbiome.

▼ SYNERGISTIC CONSIDERATIONS

- #100 ABC - Acidophilus & Bifidus Complex
- #138 MBC - Microbiome Colonizer
- #131 FBR - Fibers For Intestinal Health
- #350 Eco Vyrome - Micro Virome Maintenance
